

Class 11

practical 1

```
import java.util.Scanner;

public class mydata {

    public static void main(String[] args) {

        // Create Scanner class object

        Scanner sc = new Scanner(System.in);

        // Declaration of variables

        String name;

        int age;

        // Ask user

        System.out.println("Enter your name: ");

        name = sc.nextLine();

        System.out.println("Enter you age: ");

        age = sc.nextInt();

        // Display User info

        System.out.println("Your name is: " + name);

        System.out.println("Your age is:" + age);

        sc.close();
```

```
}  
}
```

practical 2

```
import java.util.Scanner;
```

```
public class calculator {
```

```
    public static void main(String[] args) {
```

```
        // Create Scanner class object
```

```
        Scanner sc = new Scanner(System.in);
```

```
        // Declaration of variables
```

```
        int num1;
```

```
        int num2;
```

```
        // Ask user
```

```
        System.out.println("Enter your first number: ");
```

```
        num1 = sc.nextInt();
```

```
        System.out.println("Enter your Second number: ");
```

```
        num2 = sc.nextInt();
```

```
        int sum = num1+num2;
```

```
        // Display User info
```

```
        System.out.println(num1 + " and " + num2 + "addition is: " + sum);
```

```
        sc.close();

    }
}
```

practical 3

```
import java.util.Scanner;

public class vote {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        int age;

        System.out.println("Enter Your age: ");
        age = sc.nextInt();

        if (age >= 18) {
            System.out.println("You Are Eligible For Vote");
        } else {
            System.out.println("You Are Not Eligible For Vote");
        }

        sc.close();
    }
}
```

practical 4

```
import java.util.Scanner;

class grade {

    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);

        int marks;

        System.out.println("Enter you marks: ");
        marks = sc.nextInt();

        if (marks >= 100 || marks <= 0) {
            System.out.println("Invalid marks!");
        }

        else if (marks >= 90) {
            System.out.println("Grade A");
        }

        else if (marks >= 75) {
            System.out.println("Grade B");
        }

        else if (marks >= 60) {
            System.out.println("Grade C");
        }

        else {
```

```
        System.out.println("Fail!");
    }
}
}
```

practical 5

```
import java.util.Scanner;
```

```
public class VotingEligibility {
    public static void main(String[] args) {
        // Create a Scanner object to read input from the console
        Scanner scanner = new Scanner(System.in);

        // Prompt the user for their age
        System.out.print("Enter your age: ");
        int age = scanner.nextInt();

        // Prompt the user for their citizenship status
        System.out.print("Are you a citizen? (true/false): ");
        boolean isCitizen = scanner.nextBoolean();

        // Evaluate voting eligibility based on the dynamic input
        if (age >= 18) {
            System.out.println("Old enough to vote.");

            if (isCitizen) {
                System.out.println("And you are a citizen, so you can vote!");
            } else {
```

```
        System.out.println("But you must be a citizen to vote.");
    }
} else {
    System.out.println("Not old enough to vote.");
}

// Close the scanner to prevent resource leaks
scanner.close();
}
}
```
